Contents

1 Introduction **1**
- 1.1 Training for the Olympiads 1
- 1.2 Some Pointers on Problem–Solving 2
  - 1.2.1 Problems 4

2 Review of Basic Geometry **7**
- 2.1 Terminology 7
- 2.2 Junior Certificate Geometry 8

3 Trigonometry **15**
- 3.1 Review of Basics 15
  - 3.1.1 Definitions 15
  - 3.1.2 Standard Triangles 15
  - 3.1.3 Basic Identities 16
  - 3.1.4 Complementary Angles 17
  - 3.1.5 Angles outside the range $0° - 90°$ 17
  - 3.1.6 Identities for Related Angles 18
  - 3.1.7 The Addition Formulas 20
  - 3.1.8 The Duplication Formulas (or Two-angle Formulas) . 21
  - 3.1.9 The Triplication Formulas 21
  - 3.1.10 The tan-a-half Formulas 22
  - 3.1.11 Example: Find the sine of $18°$ 22
  - 3.1.12 Sums and Differences of Sines and Cosines 23
  - 3.1.13 Radians 25
  - 3.1.14 Some Inequalities 26
- 3.2 The Triangle 27
  - 3.2.1 The Sine Rule 27
  - 3.2.2 The Cosine Rule 28
  - 3.2.3 The Semiperimeter 29

3.2.4 Area and Semiperimeter 31
3.2.5 Area and Circumradius 31
3.2.6 The Incircle and Inradius, r 31
3.2.7 Radius of an Externally-tangent Circle 32
3.2.8 Inradius in terms of One Side and the Opposite Angle 34
3.2.9 Relation between r and R 34
3.2.10 The Pedal Triangle 35
3.2.11 The Exocentric Triangle 36
3.2.12 The Euler Line and Euler Formula 37
3.3 Solving Trigonometric Equations 39
3.3.1 Example 39
3.3.2 Example 40
3.3.3 Inverse Functions 41
3.3.4 Inverse tan Formulas 42
3.3.5 Relation between $\sin^{-1}$ and $\cos^{-1}$ 42
3.3.6 Inverse Version of the Addition Formula 42
3.3.7 The maximum and Minimum of $a\cos\theta + b\sin\theta$ when a and b are constant. 43
3.3.8 Example 44

4 Induction **45**
4.1 Introduction 45
4.1.1 Example *Prove that* $1 + 2 + 3 + \cdots + n = \frac{1}{2}n^2 + \frac{1}{2}n$ *for every integer* $n \geq 1$. 45
4.1.2 The Idea 45
4.1.3 The Method of Induction: 46
4.1.4 Solution to Example 4.1.1 46
4.2 Further Examples and Problems 47
4.2.1 Examples 47
4.2.2 Problems 48

5 Number Theory **49**
5.1 Division and Parity 49
5.1.1 Introduction 49
5.1.2 The Division Algorithm 50
5.1.3 Parity 50
5.1.4 Examples 51
5.2 Writing Integers to the Base b 52
5.2.1 Arbitrary Base, b 52
5.2.2 Base 2: Binaries 54

5.2.3 Example 55
5.3 Prime and Composite Numbers 56
5.3.1 Primes 56
5.3.2 The Unique Factorisation Theorem 56
5.3.3 Examples 57
5.3.4 Basic Properties 59
5.3.5 Examples 59
5.3.6 Sophie Germain's Identity 61
5.4 Finding Greatest Common Divisors 62
5.4.1 The gcd 62
5.4.2 The Euclidean Algorithm 62
5.4.3 Euclid's Lemma 63
5.4.4 Linear Diophantine Equations 64
5.5 Modular Arithmetic and Congruences 65
5.5.1 Remainders 65
5.5.2 Congruence 66
5.5.3 Remarks 67
5.5.4 Examples 68
5.5.5 Uses of Congruence 68
5.5.6 Examples 69
5.5.7 Simple Divisibility Criteria 71
5.5.8 Exercises 72
5.5.9 Fermat's Little Theorem 72
5.6 Pythagorean Triples 73

6 Combinatorics **77**
6.1 The Pigeonhole Principle 77
6.1.1 Examples 77
6.1.2 Problems 77
6.2 Combinatorics and Binomial Coefficients 79
6.2.1 Permutations 79
6.2.2 Examples 79
6.2.3 Combinations 80
6.2.4 Example 82
6.2.5 Pascal's Triangle 82
6.2.6 Problems 83
6.2.7 Solution to a tricky one 84
6.2.8 Miscellaneous problems: 85

7 Inequalities **87**
7.1 Inequalities involving large powers 87
7.1.1 Examples 87
7.1.2 Exercises 89
7.2 Arithmetic mean – Geometric mean inequalities 89
7.2.1 Proof of the AM-GM Inequality 89
7.2.2 Examples 90
7.2.3 Problems 91
7.3 Completing the Square 92
7.3.1 Examples 92
7.3.2 Problems 93
7.4 The Rearrangement Lemma 93
7.4.1 The Basic Version 93
7.4.2 Elaborate Version 93
7.4.3 Examples 94
7.4.4 Problems 94
7.5 Inequalities and Induction 94
7.5.1 Induction Method 1 95
7.5.2 Induction Method 2 95
7.5.3 Problems 96
7.6 Further Examples 96
7.6.1 Exercise 98

8 Complex Numbers **99**
8.1 Basics 99
8.2 Polar Coordinates 99
8.2.1 Modulus, or Absolute Value 100
8.2.2 The Line Joining Two Points 100
8.2.3 Circles 101
8.2.4 Argument 101
8.3 De Moivre's Theorem 102
8.3.1 The Theorem 102
8.4 Solving Equations 102
8.4.1 Dividing Polynomials by Polynomials 103
8.4.2 Complex Roots of Real Polynomials 103
8.5 Roots of Unity 104
8.6 Geometry and Complex Numbers 105
8.6.1 Exercises 105

9 More Algebra **107**
9.1 Methods for Solving Equations 107
9.1.1 Quadratics 107
9.1.2 Other Examples in One Unknown Variable 108
9.1.3 Examples in Two Unknown Variables 109
9.1.4 Some Equations in Three Unknowns 110
9.2 Factors 112
9.2.1 Examples 112
9.3 Factorization Using Complex Numbers 114
9.3.1 Cube Roots of 1 114
9.3.2 The Factors of $a^3 + b^3 + c^3 - 3abc$ 115

10 More Geometry **117**
10.1 Writing Proofs and Presenting Solutions 117
10.1.1 Writing 117
10.1.2 Proofs 118
10.1.3 Proof by Contradiction 119
10.1.4 Converses 119
10.1.5 Induction 120
10.2 Some Theorems about Triangles 120
10.2.1 Theorem 120
10.2.2 The Circle of Apollonius 121
10.2.3 Ptolemy's Theorem 122
10.2.4 Ceva's Theorem 124
10.2.5 The Converse to Ceva 125
10.2.6 Menelaus' Theorem 126
10.2.7 The Converse to Menelaus 127
10.2.8 Simson's Theorem 127
10.2.9 Theorem (The 9-point Circle) 129
10.3 Algebraic Geometry 130
10.3.1 Changing the Problem 130
10.3.2 Midpoints 130
10.3.3 Proportional Division 130
10.3.4 The Centroid of a Triangle 132
10.3.5 Apollonius' Theorem 133
10.3.6 Exercises 134
10.3.7 The Area of a Triangle 135
10.3.8 Exercise: Brahmagupta's formula 136
10.4 The Straight Line 136
10.4.1 Polar Form 136

10.4.2 The Angle between Two Lines 137
10.4.3 Making up Equations 137

11 Functional Equations **141**
11.1 Examples 141
11.2 Methods 142
11.2.1 Further Exercises 143
